

Using satellite-derived PM_{2.5} dataset to assist air pollution management in California

H-AQAST Member: Minghui Diao (PI), Frank Freedman, Sen Chiao, Ana Rivera*

Department of Meteorology and Climate Sciences; *Department of Geography, San Jose State University

Co-I: Mohammad Al-Hamdan, Universities Space Research Association, NASA Marshall Space Flight Center

Co-I: Akula Venkatram, Department of Mechanical Engineering, University of California Riverside

Stakeholder Contact: Saffet Tanrikulu (Bay Area Air Quality Management District)

Cynthia Garcia (California Air Resource Board)

Sang-Mi Lee (South Coast Air Quality Management District)

Collaborators: Meytar Sorek-Hamer & Robert Chatfield (NASA ARC)

Some of the highlights

A review paper in preparation for PM_{2.5} exposure estimates

Methods, availability, and applications of PM_{2.5} exposure estimates derived from ground measurements, models, and satellite datasets

San Francisco Bay Area average of AOD ArcGIS visualization

Test of individual days in the winter of 2016

November 2 2016 AQUA 2:30PM: <http://arcg.is/zGbTm>

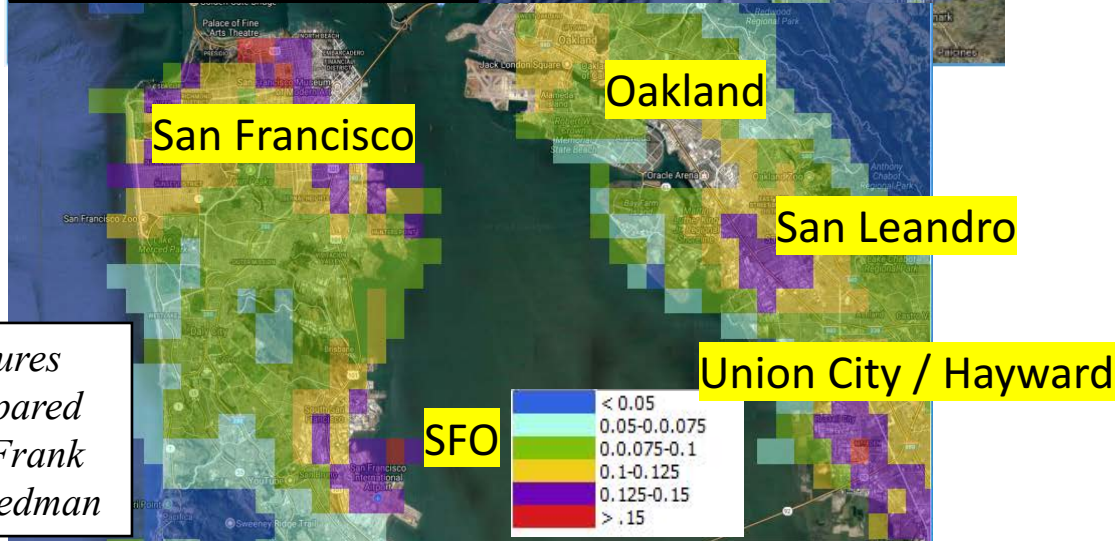

A composite analyses of 14 days in 2016 winter

San Francisco Bay Area Average of AOD:

<https://arcg.is/1XbzCy>

- Average of MAIAC Aqua AOD fields
- Number of Days: 14 (Jan 27, Feb 13, Feb 22, Feb 24, Feb 25, Feb 29, Mar 16, Nov 2, Nov 4, Nov 8, Nov 9, Nov 13, Dec 20, Dec 29).
- No HRRR winds, only average AOD image.

Figures prepared by Frank Freedman

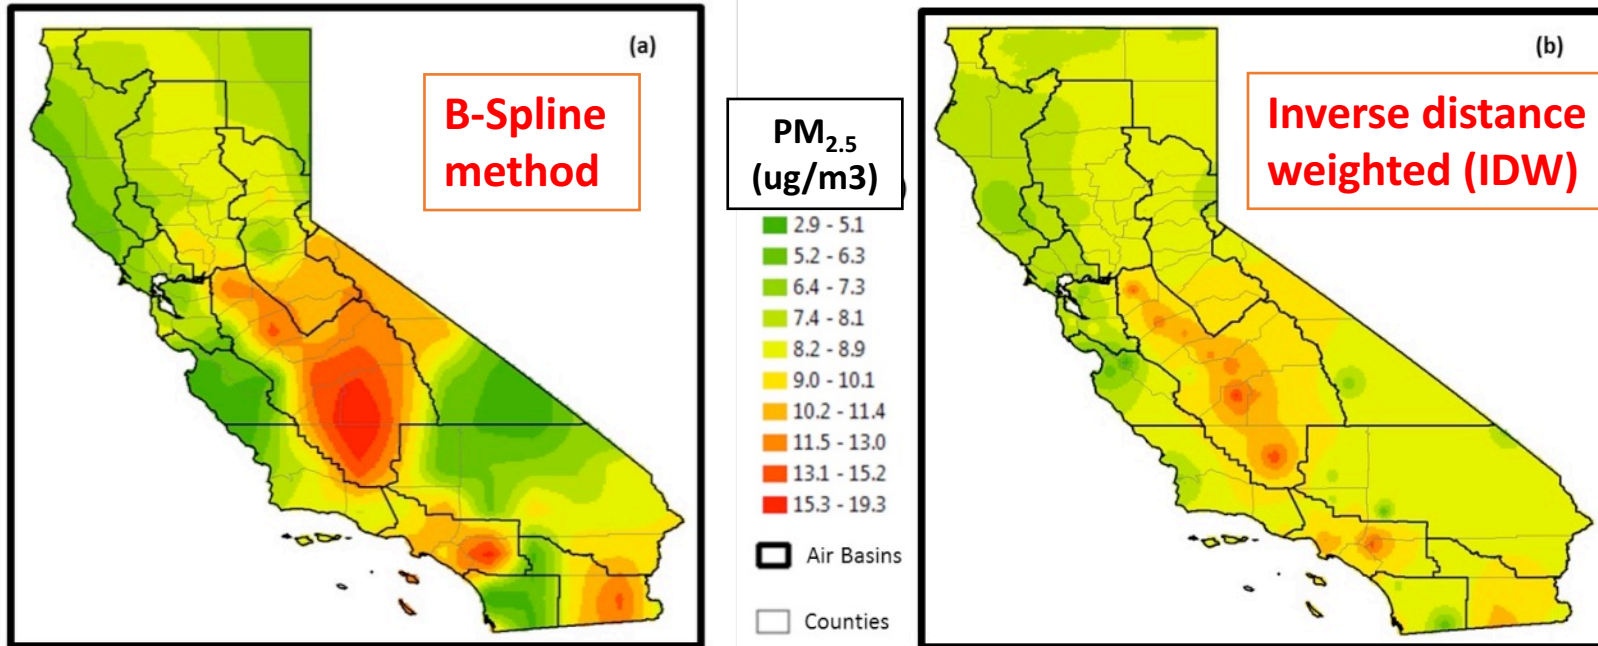

Predicted $PM_{2.5}$ Quantile 0.9 over 23 days (prepared by Robert Chatfield and Meytar Sorek-Hamer)

Selection criteria:
(1) clear skies,
(2) good AOD coverage
(3) 500 mb geopotential height ≥ 576 decameters

A two-page proposal submitted to California Air Resource Board for AB617 legislation

Sensitivity tests to surfacing algorithms

(1) Two methods for PM_{2.5} 3-km Surfaces Annual Mean Composite in 2016

(2) Comparisons of two methods

Validation statistics based on 44 non-FRM monitors in different locations throughout California

Correlation Coefficient (R), Root Mean Square Error (RMSE), Mean Error (ME) (Bias), and Mean Absolute Error (MAE).

Surfacing Technique	Data Source	R	RMSE	MAE	ME
IDW	AQS Only	0.68	4.59	3.45	0.71
IDW	Merged AQS/MODIS	0.76	4.14	3.15	0.84
B-Spline	AQS Only	0.742	4.714	3.505	0.06
B-Spline	Merged AQS/MODIS	0.737	4.713	3.501	-0.02

Prepared By:

Dr. Mohammad Al-Hamdan

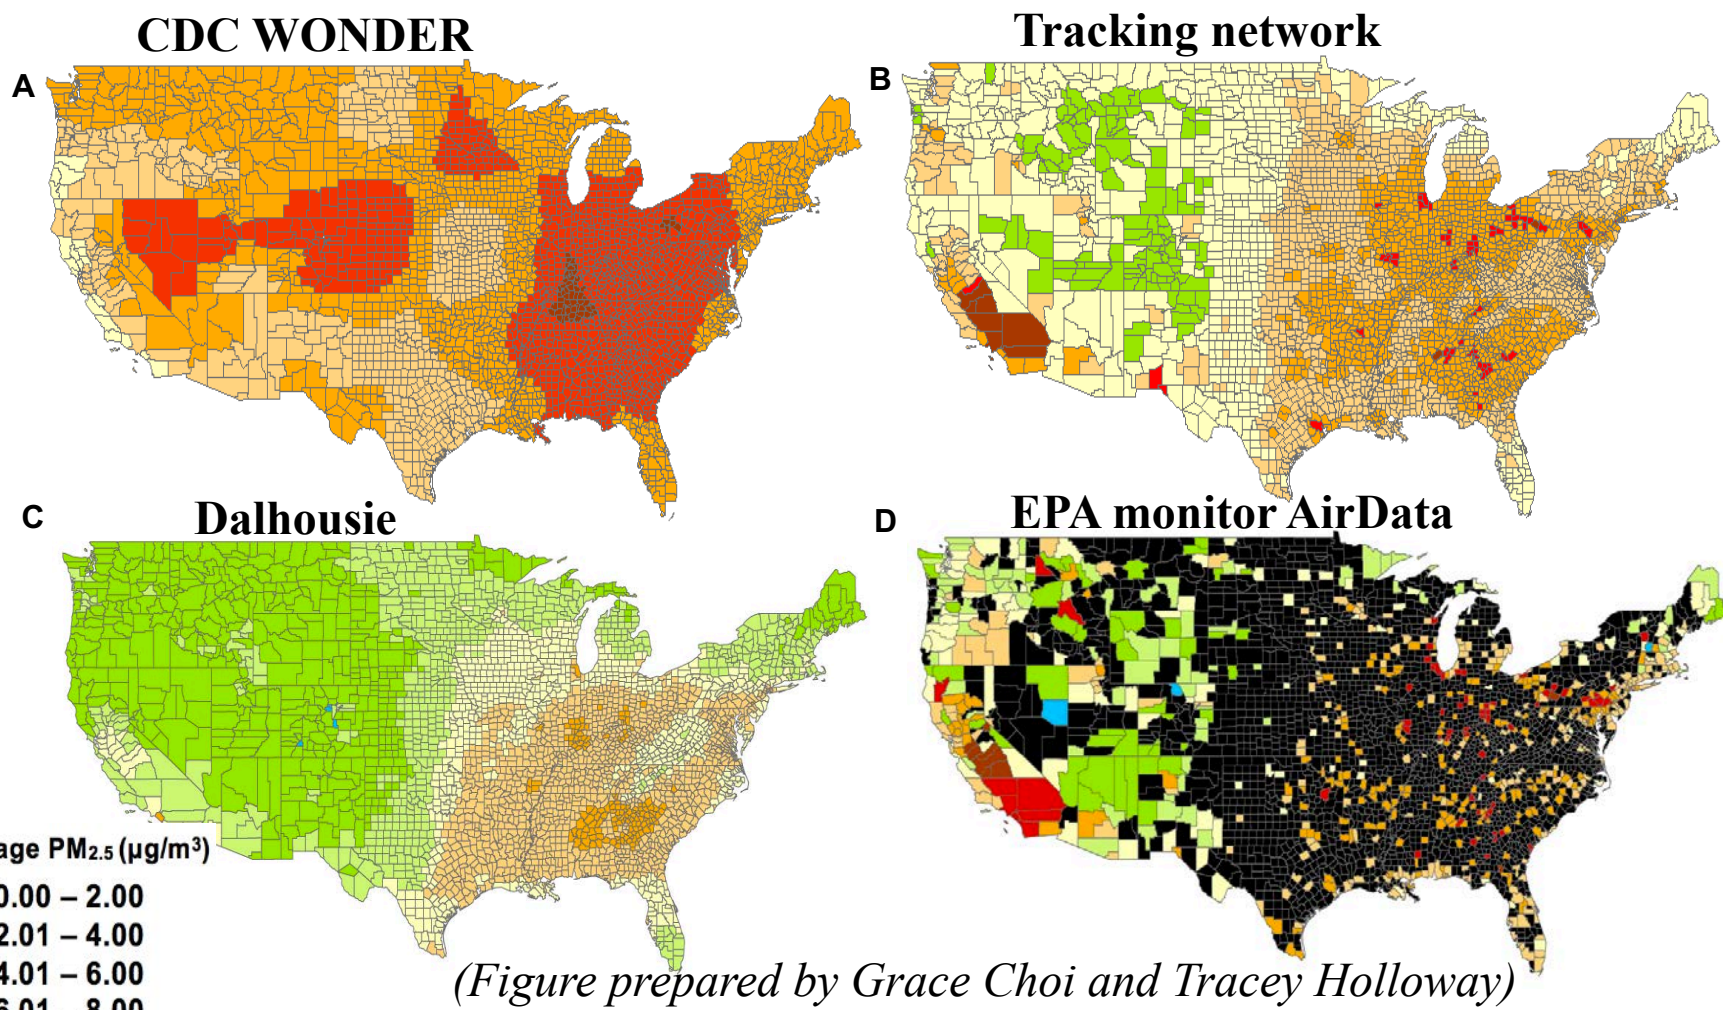

USRA at NASA/MSFC

April 30, 2018

**Details about the surfacing methods used can be found at Al-Hamdan et al. (2009, JAWMA; 2014, Geocarto)*

Comparisons of three commonly-used publicly available PM_{2.5} datasets in the contiguous U.S.

ArcGIS-generated county-level maps of PM_{2.5} in 2011

- (1) CDC WONDER exhibits higher PM_{2.5} and a large regional maximum over the central U.S.
- (2) For Southern California, EPHTN shows the highest PM_{2.5} (over 14 µg/m³)
- (3) Dalhousie exhibits lower PM_{2.5} overall, and is more spatially homogeneous over the western U.S.

(Figure prepared by Grace Choi and Tracey Holloway)

Diao M., T. Holloway, S. Choi, S.M. O’Neill, M.Z. Al-Hamdan, A.van Donkelaar, R.V. Martin, X. Jin, A.M. Fiore, D.K. Henze, F. Lacey, P.L. Kinney, F. Freedman, N.K. Larkin, Y. Zou, A. Vaidyanathan Methods, availability, and applications of PM_{2.5} exposure estimates derived from ground measurements, models, and satellite datasets, in preparation.

Statistical distributions of three PM_{2.5} datasets in the contiguous US in 2011

- (1) CDC WONDER: overall higher values
- (2) Dalhousie: the lowest mean values of PM_{2.5} overall, and the largest standard deviation

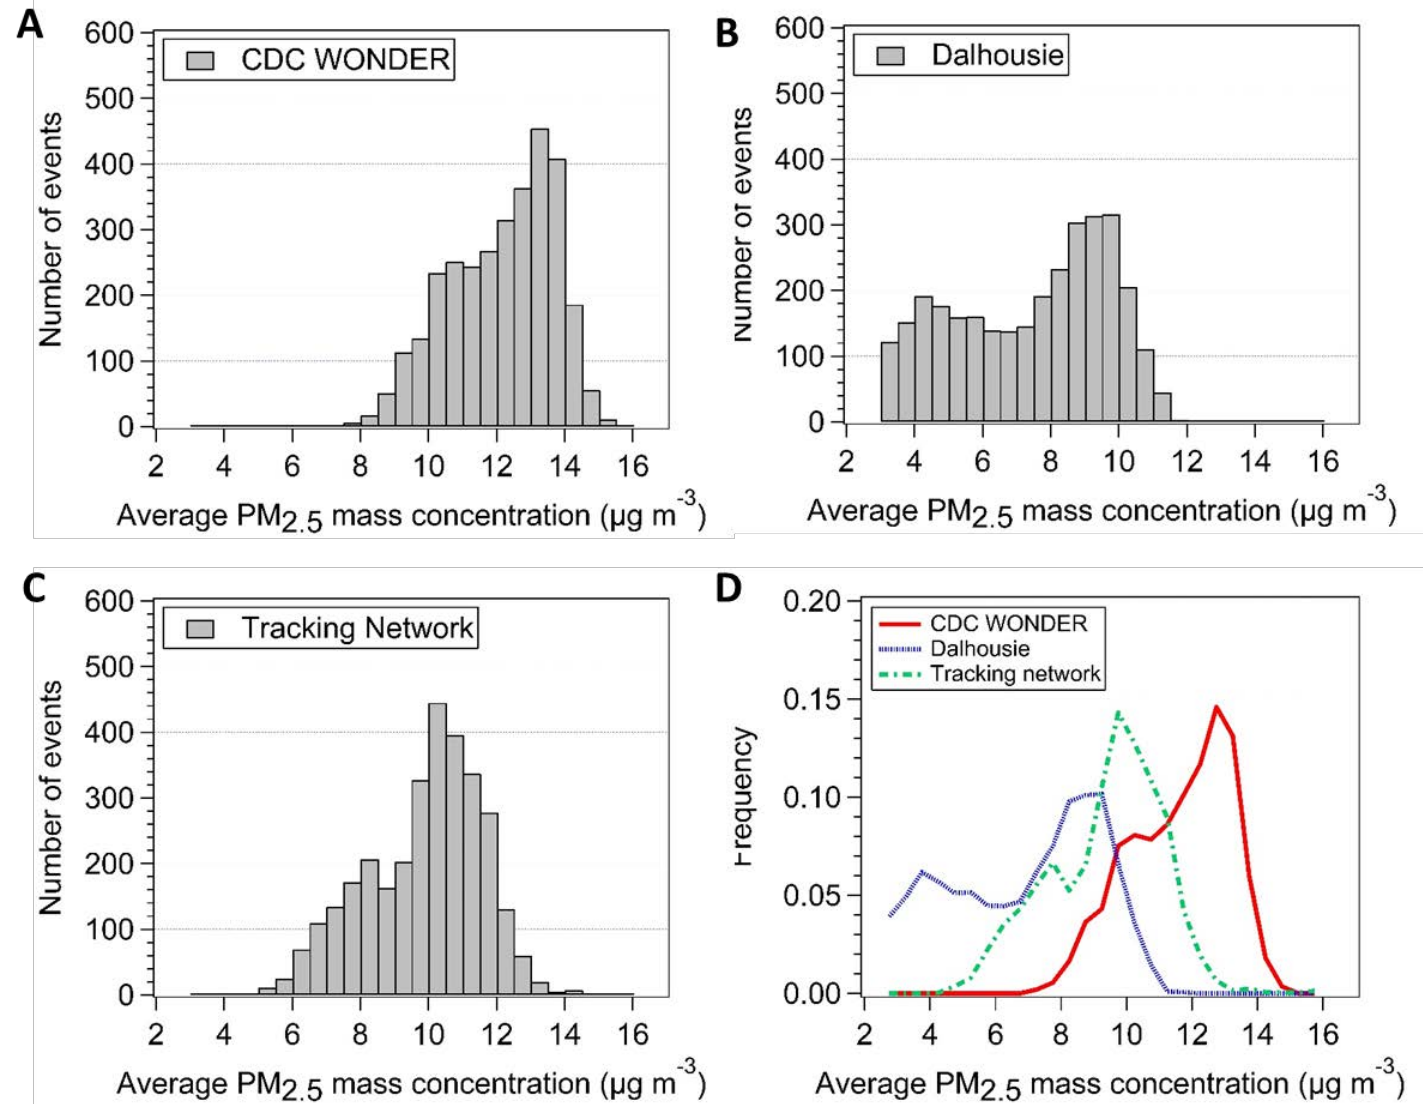

Figure prepared by Minghui Diao, Grace Choi and Tracey Holloway

Year 2 Progress Update, PI Diao

Integrating Satellites into Health and Air Quality Management

- 1. Satellite-derived PM_{2.5} grids
 - Develop, apply and evaluate regression model for California;
 - Construct AOD-PM_{2.5} surfaces for California for 2016 and 2017;
 - Preparation of *a review paper* on PM_{2.5} data availability, method and analyses, led by Minghui Diao
- 2. Visualization of satellite-derived PM_{2.5} grids (mostly finished)
 - Develop visualization of MAIAC AOD and derived PM_{2.5} on selected days (LA, Bay Area, Imperial Valley);
 - Analysis and incorporation of HRRR wind fields.
- 3. Dispersion model simulation
 - Development and evaluation of the dispersion model simulations

Tiger Team Participation

- TT#1 led by Patrick Kinney
 - Developed in a GIS at 1-km modeling grid that overlaps the MATES-IV modeling grid; Processed the remotely-sensed data of 2012, integrated into 1-km modeling grid;
 - Deploy low-cost sensors in three Bay Area sites;
 - MAIAC AOD and dispersion modeling analysis of PM₁₀ and PM_{2.5} fields across Imperial Valley.
- TT#2 led by Susan O'Neill. Our group will contribute to the PM_{2.5} data derived from satellite data and use downscaling model to provide higher resolution data.
- 8+ academic talks; 5 stakeholders; research website on HAQAST project at SJSU:
 - www.cloud-research.org

Project Overview
